

Heavy-Duty Modular Design Fuse Block & Bus Bars

Module box design for clean, neat and easy wiring configurations

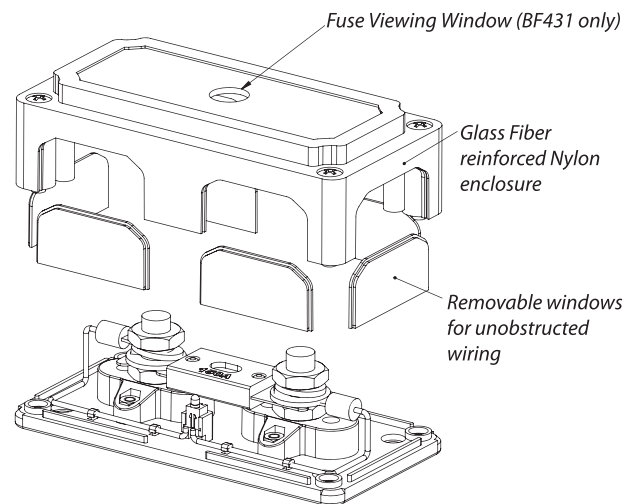

Description

Created for easy and clean installation of heavy duty electrical wiring and circuit protections on the boats, BF43x series are the perfect choice for modern boaters with higher electrical needs. All models are of the same dimensions (with the box length being exact two times of the width), allowing neat and clean wiring management. The covers come with 6 removable windows at 4 directions for flexible and unobstructed wiring. Blank write-on space on the top allows easy labeling for each block and branch (except BF431).

Each model of BF43x series is designed with robust flame-retardant Glass Fiber reinforced Nylon enclosure with great mechanical strength and durability. The BF43x series include a complete product line of heavy-duty fuse block (ANL & Maxi Fuses), bus bars and terminal studs that suit most needs in battery wiring management.

Features

- Robust Glass Fiber reinforced Nylon enclosure
- All models are of the same dimensions (see below)
- 6 removable windows at 4 directions
- Blank write-on space on the top allows easy labeling
- Complete product line including fuse blocks, bus bars and terminal studs
